OVERVIEW

iMCP – HT32SX is a Multicomponent Integrated Circuit (MCO) designed to provide a ready-to-use connectivity solution for Internet of Things (IoT) applications. It provides both uplink (transmit) and downlink (receive) communications, and it is the first HT Micron product in a new family of non-memory component. Its small dimensions, high performance and low power consumption targets the best experience for IoT developers. The system combines an ARM Cortex M0+ 32bit (STM32L052x8) and the ST Microelectronics S2-LP low power transceiver combining all the advantages, integration and convenience of advanced semiconductor packaging technology into a single chip.
