HT MICRON

Sigfox® Monarch RF Transceiver System-in-Package

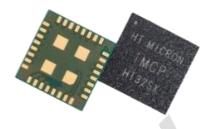

OVERVIEW

The iMCP – HT32SX is a Multicomponent Integrated Circuit (MCO) designed to provide a ready-to-use connectivity solution for Internet of Things (IoT) applications. It provides both uplink (transmit) and downlink (receive) communications, and it is the first HT Micron product in a new family of non-memory components. Its small dimensions, high performance and low power consumption targets the best experience for IoT developers. It features an ARM Cortex M0+ 32bit (STM32L052x8) and the S2-LP low power transceiver from ST Microelectronics combined with the SKY66420 from Skyworks Solutions which provide all the performance advantages, integration and convenience of advanced semiconductor packaging technology into a single chip.

FEATURES

- Key features
 - Enables operations in the SIGFOX™ network
 - Multizone worldwide operation MONARCH feature
 - ARM Cortex M0+ 32bit STM32L052x8 MCU
 - Integrated 50 MHz crystal
 - 64 KB flash Other options will be available on demand
 - 8 KB RAM
 - TX output power up to +24 dBm
 - RX sensitivity: -128 dBm*
- Power consumption
 - 18 mA RX
 - 160 mA TX @24 dBm, 902.2MHz
- RF
 - S2-LP Transceiver STMicroelectronics
 - SKY66420-11 Front-End Module
 - Frequency bands:
 - o 413-479 MHz
 - o 452-527 MHz
 - o 826-958 MHz
 - o 904-1055 MHz
 - Modulation schemes:
 - o DBPSK, 2(G)FSK, OOK, ASK
 - Data Rate:
 - o Up to region: 100bps or 600bps

*Expected performance

INTERFACES

- Up 21 General-Purpose Input/Output (GPIO) pins, with configurable pull-up/pull-down resistors
- 12-bit ADC
- 12-bit 1 channel DAC
- 2 USART, LPUART, USB 2.0, I2C
- Single power supply: 2.7 V to 3.6 V
- Operating temperature range: -20°C to +75°C*
- External antenna
- 13x13x1.35mm LGA 32 pads package
- Part number: HT32SX

APPLICATIONS

- Smart home
- Wireless alarm systems
- Manufacturing
- Agriculture
- Building automation
- Smart metering
- Smart lighting systems
- Smart grid monitoring

3.3 Power consumption

Characteristics measured over recommended operating conditions unless otherwise specified. Typical values are referred to 25 $^{\circ}$ C temperature, VDD = 3.3 V.

Table 6: Low-power state power consumption TA = 25 °C, VDD = 3.3 V, 50 MHz crystal oscillator.

Parameter	Conditions	Min	Тур.	Max	Unit
	Shutdown	-	-	-	nA
	Standby	3.8	4.5	5	mA
Supply current	Sleep	-	-	-	uA
	Deep sleep	-	4	8	uA

TABLE 7: POWER CONSUMPTION IN RECEPTION TA = 25 °C, VDD = 3.3 V, FC = 905 MHz

Parameter	Conditions	Min	Тур.	Max	Unit	
Supply current	RX @ -102	_	10		mΔ	
Supply current	sensitivity level	_	18	_	mA	

Table 8: Power consumption in transmission TA = 25 °C, VDD = 3.3 V, FC = 902.2 MHz

Parameter	Conditions	PA	Min	Тур.	Max	Unit
Supply current	TX @24 dBm on packet transmission	ON	-	-	160	mA
	TX @13 dBm on packet transmission	OFF	-	-	30	IIIA

3.4 Clock source

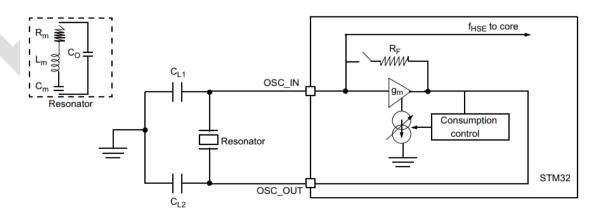

TABLE 9: 50 MHz Internal XTAL clock source characteristics

Parameter	Conditions	Min	Тур.	Max	Unit
Nominal frequency	-	-	50		MHz
Frequency tolerance	-20°C to 75 °C	-10	-	+10	ppm
Load capacitance	-	-	7	-	pF
Motional resistance (ESR)	-	-	-	60	Ω

3.5 External clock resonator

The external clock resonator can be of high speed (1-25MHz) or low speed (32.768kHz), which can be connected to pins 25 and 26 of the iMCP HT32SX V2.2. The connection diagram is shown below. For CL1 and CL2, it is recommended to use high quality ceramic capacitors in the 5pF to 25 pF range (typ.), designed for high frequency applications, and selected to match the requirements of the crystal or resonator. These capacitors are usually of equal value with a rough estimate of 10 pF each. CL1 and CL2 includes PCB and the MCU pin capacitances.

FIGURE 3: EXTERNAL OSCILLATOR CIRCUIT DIAGRAM.

4 RF CHARACTERISTICS

Table 10: Transceiver and Receiver Characteristics. TA = 25° C based on Characterization; not tested in Production. VDD = 3.3V; All RX measurements made at the antenna connector, to a bit error rate (BER) Limit of 1%. Lower frequencies update soon.

Parameter		Min	Тур.	Max	Unit
	TX	865	-	924	MHz
RF Frequency	RX	869	-	923	MHz
Tx max. output power		-	24	-	dBm
Tx power variation vs. temperature		-	-	-	dB
Emission 2 nd Harmonics (conducted)		-40.4	-47.3	-39.9	
Emission 3 rd Harmonics (conducted)		-50.5	-76.2	-55.0	dBc
Emission 4 th harmonic		-78.9	-78.6	-70.0	
Data Rate	TX (RC1, RC3, RC5, RC6, RC7)	-	100		bps
(for Sigfox Regions)	TX (RC2, RC4)	-	600	-	bps
	RX (All RCs)	-	600	-	bps
Antenna Load Impedance			50		Ohm
Rx Sensitivity (@600bps, GFSK)			-128*		dBm
Rx Spurious Emission (30MHZ~12.75GHZ)		-	-	-	dBm
Rx Blocking at 10MHz offset		1	-	-	dB
RSSI Resolution		-	-	-	dB

^{*}Expected performance

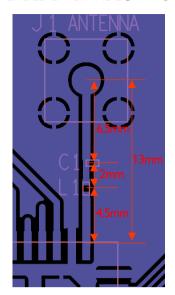

4.1 External impedance matching network

An external LC matching network is recommended to improve the output power level of the output signal in pin 1 (series inductor and shunt capacitor). The reference specifications for a reference FR4 1.6 mm 1 Oz copper printed circuit board (PCB) are shown below.

- SMD ceramic inductor: 5.6 nH, +-5% tolerance, 0402 size, PN L-07C5N6SV6, Johanson Technologies
- SMD ceramic capacitor: 4.7 pF, +-0.1pF tolerance, 0201 size, PN 250R05L4R7BV4S, Johanson Technologies

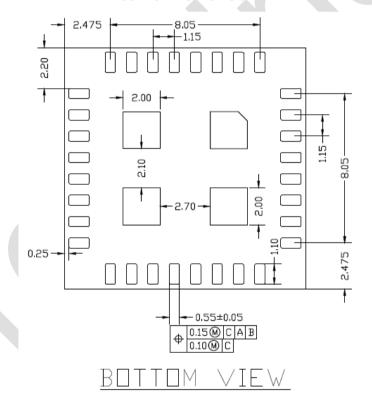

The reference PCB traces are shown in Figure 4 for an example of an output using an SMA connector. The trace width are the same as the pad width in the recommended footprint in section 6.
